BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

                                                                                                   The enzyme acyl Coenzyme A-cholesterol acyltransferase 1 (ACATI) mediates sterol esterification, an important component of intracellular lipid homeostasis. The present sequence is the coding sequence of human ACAT Related Gene Product 2 (ARGP2/ ACAT2). The enzyme encoded by the present sequence is a diacylgy/vectol acyltransferase (DGAT). ARGP2 seterifies cholesterol. Also, the activity of ARGP2 is relatively resistant to histidine active site modifier. ARGP2 is therefore a tissue specific

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes the human acyl CoA:cholesterol
acyltransferase designated ACAT-2. ACAT-2 polypeptides can be
acyltransferase designated ACAT-2. ACAT-2 polypeptides can be
administered therapeutically, especially by expressing encoding
polynucleotides, to treat individuals in need of ACAT-2 polypeptide.
They may especially be administered to treat disease conditions
associated with elevated cholesterol ester levels e.g.
hypertrolesterolaemia or hyperlipidaemia (including
hypertrolesterolaemia) and paperlipidaemia (including
hypertrolesterolaemia) and paperlipidaemia (including
hypertrolesterolaemia) and paperlipidaemia (including
hypertrolesterolaemia) and substrates. The polypeptides can also
be used to dispose diseases related to polypeptide expression or
activity, by analysing for polypeptide presence or amount in a sample.
They are useful to screen for compounds inhibiting or activating the
polypeptide, which can be included in pharmaceutical compositions and
administered therapeutically to treat conditions associated with ACAT-2;
inhibitory agents can especially be used to inhibit ACAT-2 activity,
this to man and the paperlially agents which selectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ij

                                                                                                                                                                                                                                                                                      1380
                                                                                                                                                                                  polypeptide, useful to treat conditions associated with elevated sterol ester levels e.g. hypercholesterolemia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes the mouse acyl CoA:cholesterol acyltransferase designated ACAT-2. ACAT-2 polypeptides can be administered therapeutically, especially by expressing encoding polynucleotides, to treat individuals in need of ACAT-2 polypeptide. They may especially be administered to treat disease conditions associated with elevated cholesterol ester levels e.g. hypertholesterolaemia or hyperlipidaemia (including hypertriglyceridaemia), since ACAT-2 catalyses the esterification of cholesterol with fatty acyl CoA substrates. The polypeptides can also be used to diagnose diseases related to polypeptide expression or activity, by analysing for polypeptide presence or amount in a sample.
                                                                                                            AACTTCATGATGCATGACCAGCGCACCGGCCATGGAACGTGCTGATGTGGACCATG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mouse; acyl CoA:cholesterol acyltransferase; ACAT-2; diagnosis; antilipaemic; hypercholesterolaemia; hypertriglyceridaemia; hyperlipidaemia; ss.

                                                                                                                                                                                                                                                                                                           This isolated nucleic acid molecule encodes human acylcoenzyme A:cholesterol acyltransferase III (see AAW43407), or ACAT related gene product 2 (ARGP-2), whose expression appears to be restricted to the foetal liver, suggesting it to have a role in lipid metabolism during development. It was identified following database searching for human ACAT-related sequences and use of PCR and RACE to obtain full-length sequences. An isolated nucleic acid (see AAV01533) for human ARGP-1 (see AAW43406) was also identified. Also claimed are host vector systems for production of ARGP-1 and ARGP-1 con-human mammals. ARGP-1 and ARGP-1 nucleic acids can be used to treat or diagnose a subject who has an imbalance in sterol levels due to a defect in esterification of sterols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nucleic acid molecule, or a vector expressing the oligonucleotide, can be used to inhibit wild-type ARGP-1 or ARGP-2. The wild-type enzymes can be used to identify an inhibitor, useful in the treatment of atherosclerosis or hyperlipidaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TGGCTGTACAGCTACGTGTATCAGGATGGGCTGCGGCTCCTTGGTGCCCGGGGCCGAGGG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    hybridising to a unique sequence of nucleotides in the isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Indels ; 0;

It also allows the design of antisense DNAs or RNAs to inhibit ACAT prodction, or probes to identify different forms of human ACAT or ACAT from different animal species.

The invention relates to isolated nucleic acids (see AAV01533-35) coding for human and mouse acylcoenzyme A:cholesterol acyltransferase II and III (see AAW43406-08), also designated ACAT related gene products (ARGP) 1 and 2. These can be used to identify inhibitors useful in the treatment of atherosclerosis and hyperlipidaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            688
comprises an isolated nucleic acid molecule encoding yeast wild type acyl-coenzyme A:cholesterol acyltransferase I (AREI) (see AAW38417) or 2 (ARE2) (see AAW38418) operatively linked to a promoter. The vector and a claimed host-vector system can be used for the recombinant production of AREI or ARE2. The products can be used to identify novel AREI or ARE2 inhibitors. ARE2 inhibitors can be used to treat arteriosclerosis or hyperlipidaemia, as well as to inhibit fungal growth or to treat fungal invasion (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                            CATCCCTGGGGAAACAGAAAGTTTTCATCATCGCAAGTCCCTGCTTGATGAGCTGATGG 346

The Univention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1013
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1073
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CCTCCATTGCTGGCTCAACGCCTTTGCCGAGATGCTACGATTTGGAGACAGGATGTTCTA 1133

useful in developmental biology and in circuity of cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The acetyl coenzyme A: cholesterol acetyl-transferase (ACAT) gene sequence enables the screening of human populations for abnormal human ACAT activities for disease diagnosis. It provides information concerning the catalytic mechanism of ACAT and allows the design of drugs serving as specific ACAT inhibitors, desirable for the prevention and/or treatment of human hypercholesterolaemia and human atherosclerosis. It also allows the design of antisense DNAs or RNAs to inhibit ACAT prodction, or probes to identify different forms of human ACAT or ACAT from different animal species This sequence is a human ACAT clone designated CI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        407 TCAGCACCCTGGCCATCGACTTCATGATGAGGCAGGCTGCTGCTGG--AGTTTGACCT

                                            This nucleic acid molecule encodes human acylcoenzyme A:cholesterol acyltransferase I (see AAW412), or ACAT II. The invention relates to isolated nucleic acids (see AAV01533-15) coding for human and mouse acylcoenzyme A:cholesterol acyltransferase II and III (see AAW4406-08), also designated ACAT related gene products (ARGP) 1 and 2. These can be used to identify inhibitors useful in the treatment of atherosclerosis and hyperlipidaemia.
                                                                                                                                                                                                                                         Gaps

Claim 5; Fig 15A-B; 121pp; English.

The present invention provides human cDNAs, proteins and related genomic DNAs. These can be used in the treatment of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders and inflammation. The present sequence

```
was identified following database searching for human ACAT-related sequences and use of PCR and RACE to obtain full-length sequences. To sequences and use of PCR and RACE to obtain full-length sequences. An isolated nucleic acid (see AAV01534) for human ARGP-2 (see AAW43407) was also identified. Also claimed are host vector systems for ARGP-1 and ARGP-2 nucleic acids can be used to diagnose or treat a subject who has an imbalance in sterol levels due to a defect in sterol esterification. A claimed oligonucleotide capable of specifically hybridising to a unique sequence of nucleotides in the isolated nucleic acid molecule, or a vector expressing the oligonucleotide, can be used to inhibit wild-type ARGP-1 or ARGP-2. The Wild-type enzymes can be used to identify an inhibitor, useful in the treatment of atherosclerosis or hyperlipidaemia.
